

WISI CHAMELEON Stand-Alone Pro:Idiom Scrambler

GN PISCR8
For eight services

GN PISCR16
For 16 services

GN PISCR24
For 24 services

Chameleon Pro:Idiom Scrambler

Scrambling with Pro:Idiom in the CHAMELEON is enabled by the software option GN PISCR24 together with the GNSTR streaming licence. The scrambler will receive IP streams and after scrambling outputs again in IP. A total of 20 IP-streams can be streamed, but can be extended to 128 with the GNSTRX licence.

Features

- ✓ Up to 24 services scrambled with Pro:Idiom
- ✓ IP UDP/RTP IP input and output
- ✓ Totally 20 IP input streams (extendable to 128)
- ✓ Pro:Idiom key management
- ✓ 19" 1HU chassis with embedded power supply and cooling

ANY VIDEO FROM ANY SOURCE TO ANY DEVICE

The Chameleon Pro:Idiom scrambler is an extremely flexible solution for encrypting content for hospitality without the need for an external Conditional Access server. Everything needed for the encryption is embedded in the Chameleon Pro:Idiom scrambler. Up to 24 services can be scrambled.

Selecting Software Options

As a help for our customers we have developed WISI Configurator. This is an online tool to help you select and order the optimal software options for your particular installation. You can also talk to your WISI sales contact for help with selecting software options.

Purchasing Software Options

You can purchase your software options directly through WISI Configurator, or through your WISI sales contact. Once your order has been processed, the entitlement file containing the software options are available for download at the WISI Connect portal.

Activating Software Options

To activate your software options you need to upload an entitlement file to your Chameleon. Download the file containing your software options from WISI Connect, and upload it to your Chameleon through WISI Control or through the IP Supporter tool.

WISI CHAMELEON

Stand-Alone Pro:Idiom Scrambler

What is a Software Option?

The Chameleon modules use software options to activate functionality. With them you decide what you want your Chameleon to be able to do. A software option purchased for a Chameleon can only be used in that specific module. When ordering a software option, the serial number of the Chameleon module must be stated.
