

GTBISS

Software option for BISS1/BISS2 descrambling of 8 Services

Description

BISS1 and BISS2 descrambling in the TANGRAM is enabled by the SW option GTBISS. GTBISS allows you to use the TANGRAM as a descrambler for decrypt input services by entering a session word via the web interface.

Features

- ✓ BISS descrambler
- ✓ No external CAS connection necessary
- ✓ Multiple service descrambling
- ✓ PID level descrambling
- ✓ Support descrambling of MPEG-2 and H.264 in SD and HD
- ✓ Descrambling without CAM and Smart card

Scope of delivery

- After purchase, the software option is available for download at www.wisiconnect.tv.

GTBISS

Software option for BISS1/BISS2 descrambling of 8 Services

Technical data

BISS Descrambler	
Number of decrypted services	8, up to 128 with 16x GT BISS
Number of decrypted PIDs	32, up to 512 with 16x GT BISS
Maximum descrambling throughput	max. 300 Mbps for GT 31 W, max. 850 Mbps for GT 41
Supported descrambling keys	75 for GT 31 W, 150 for GT 41
Supported Modes	BISS-1, BISS-E, BISS2-1, BISS2-E
